

GPS Disciplined Rubidium & Time Reference

Features

- Dual GPS system - full redundancy system
- <1.5us holdover per 24 hours
- Short term stability $<8 \times 10^{-13}$ at 1000sec
- Accuracy to ± 25 ns RMS UTC
- Ultra Low phase noise -115dBc at 1Hz
- NTP, PTP and IRIG output

Description

The E8010 provides a stable and accurate calibration free GPS time & frequency with multiple outputs signal formats in an easy to install 1U rack mountable chassis. This reference maintains high time and frequency accuracy required for demanding applications. The added advantage of the internal rubidium module is that there is no measurable difference between the stability when locked to GPS or in Holdover mode with measurement times up to 1000s.

Features

- RS232, USB & Ethernet interface
- Remote access & software interface
- Optional Dual GPS module
- Optional upgrade to NTP or PTP server
- Available frequencies 1Hz to 100MHz
- Built-in self calibration
- UKAS calibration certificate available
- Excellent holdover performance
- Battery back up and redundancy switchover
- Time and frequency standard for calibration & RF laboratories

 Cold starts: 25sec. 28sec.
 Warm Start: 2 sec. 2sec.

Optional Dual GPS redundancy system

E8010 is configurable with dual GPS system, power supply and remote access via Ethernet port (TCP port) for monitoring and control. The total phase error of ± 30 ns of output 1PPS and 10MHz in relation to GPS 1PPS at switchover from GPS A to GPS B is unique in its class. The E8010 can be configured to output any frequency between 1 to 100MHz of a preferred signal format. Standard connectors are BNC and SMA. Standard GPS Antenna

All Quartzlock GPS frequency references are supplied with our standard GPS Antenna, Manual, Test sheet, Calibration certificate and Certificate of conformance. The standard GPS antenna has 28dB gain sufficient to provide strong GPS signal to main GPS reference unit when placed near a window or mounted outdoor.

Standard GPS antenna Terminated with 5 meters of RG174 coaxial cable

High Gain GPS Antenna

The High Gain GPS Antenna is designed for stationary application and all weather and harsh environment to provide a strong signal. This antenna is also a high-quality solution for adding GPS RF signals to marine GPS navigation systems. The high gain GPS antenna can be setup with up to 50 meters of cable. The high gain GPS antenna is supplied with stainless steel antenna mount.
